CONTENTS

Professor A. Scheludko vii
Convective model of cross-flow microfiltration
C.S. Vassilieff (Sofia, Bulgaria) 1
Wet foams: Formation, properties and mechanism of stability
K. Malysa (Cracow, Poland) 37
Immiscible liquid–liquid displacement in thin quartz capillaries
Z.M. Zorin and N.V. Churaev (Moscow, Russia) 85
Wetting films
N.V. Churaev and Z.M. Zorin (Moscow, Russia) 109
Interfacial orientation of DOPC liposomes spread at the air–water interface
I. Panaiotov (Sofia, Bulgaria), Tz. Ivanova (Sofia, Bulgaria) and A. Sanfeld (Brussels, Belgium) 147
Disjoining pressure, contact angles and line tension in free thin liquid films
B.V. Toshev and D. Platikanov (Sofia, Bulgaria) 157
On the question of development of the thermodynamics of the systems with thin (non-Gibbsian) interlayers. Methods for determination of the thermodynamic thickness of thin interlayers
B.V. Derjaguin (Moscow, Russia) 191
Stability and permeability of amphiphile bilayers
D. Exerowa, D. Kashchiev and D. Platikanov (Sofia, Bulgaria) 201
New possibilities for foam investigation: Creating a pressure difference in the foam liquid phase
P.M. Kruglyakov (Penza, Russia), D. Exerowa and Khr. Khristov (Sofia, Bulgaria) 257
Probability of particle attachment on gas bubbles by sliding
H.J. Schulze (Freiberg, Germany) 283
Monolayers and Langmuir–Blodgett films of monomers and polymers. Polyreactions, structural transformations, properties and applications
V.V. Arslanov (Moscow, Russia) 307
